If the appliance is damaged, check immediately with the supplier before installation and operation.

Do not use this heater in the immediate surroundings of a bath, shower or swimming pool.

Do not use outdoors.

This heater must not be located immediately above or below a fixed socket outlet or connection box.

Do not cover or obstruct in any way the heat outlet grille located underneath the heater. Overheating will result if the heater is accidentally covered.

In the event of a fault unplug the heater.

Unplug the heater when not required for long periods.

The supply cord must be placed on the right hand side of the heater away from the heat outlet underneath the heater.

Although this heater complies with safety standards, we do not recommend its use on deep pile carpets or on long hair type of rugs.

The appliance must be positioned so that the plug is accessible.

If the supply cord is damaged it must be replaced by the manufacturer or service agent or similarly qualified person in order to avoid a hazard.

Caution: In order to avoid a hazard due to inadvertent resetting of the thermal cut-out, this appliance must not be supplied through an external switching device, such as a timer, or connected to a circuit that is regularly switched on and off by the utility.

This heater is not equipped with a device to control the room. Do not use this heater in small rooms when they are occupied by persons not capable of leaving the room on their own, unless constant supervision is provided.

The appliance must not be located beneath a socket outlet.

General

Unpack the heater carefully and retain the packaging for possible future use, in the event of moving or returning the fire to your supplier.

The fire incorporates a flame effect, which can be used with or without heating, so that the comforting effect may be enjoyed at any time of the year. Using the flame effect on its own only requires little electricity.

Before connecting the heater check that the supply voltage is the same as that stated on the heater.

Please note: Used in an environment where background noise is very low, it may be possible to hear a sound which is related to the operation of the flame effect. This is normal and should not be a cause for concern.

Thermal Safety Cut-out

A thermal safety cut-out is incorporated in the heater to prevent damage due to overheating. This can happen if the heat outlet was restricted in any way.
