

#### NEW SMEG THERMOSEAL

This uniquely insulated and sealed oven creates the most desirable and stable environment for the cooking of food. Splatter and food trauma is minimised when cooked in a thermosealed oven; cooking times may be reduced due to the more even temperature maintained within the oven during cooking. Most importantly, it cares for the food like no other oven.

The addition of a Venturi humidity control system assists to establish the optimum cooking environment.

#### EVER-CLEAN ENAMELLING

Smeg's enamelling process is unique, creating a silky-smooth finish on oven interiors and baking trays. A combination of formulae, coating application and firing processes creates a truly superior result. The enamel finish is pyrolytic quality and is used on all models, both standard and pyrolytic, in the range.

#### COOL DOOR

The new oven doors are all at least triple glazed; pyrolytic model ovens have four layers of glazing. Each layer of glass has a thermo-reflective inner face to limit the absorption and eventual transference of heat to the outside surface. Each inner layer is separated by an air gap through which the tangential fan channels forced air through each layer of glass — resulting in the oven door maintaining a safe low temperature, cool enough to touch and cooler kitchen environment.

finish	satin stainless steel, fingerprint proof	
size	884mmH x 597mmW x 545mmD + 22mm door	
installation	flush fitment, wallmount	
fully automatic	minute minder, end cooking switch off, automatic switch on, end-cooking acoustic alarm	
electrical connection	hardwired, single phase	
electricity supply	220–240V, 50–60 Hz	
maximum current	23 amps	
	<b>MAIN OVEN</b>	<b>AUXILIARY OVEN</b>
